

## Poster Presentation GNB 2025: Guidelines

The template for a poster in .ppt format is available for download from the official website of the GNB 2025 conference or directly at the following link:

---

### Poster format and suggestions for poster preparation

All posters supposed to be printed by Author on A0 format (84.1x118.9 cm) in vertical position.

A poster presentation combines a visual display on a poster board of the highlights of research with a question-and-answer opportunity. You will be assigned a period during which you should be present at your poster for discussion and questions.

### Suggestions for Preparing Scientific Posters

#### Content

- The poster should show the full title of your submission.
- Text should be brief and well organized, presenting only enough data to support your conclusions.
- The text should make clear the significance of your research.
- The text should include (most likely as separate elements of the poster) your hypothesis, methods, results, and conclusions.

#### Design

There is a possible template for posters, but you are free to use your own. In any case, we advise to follow these simple suggestions":

- A clear, simple, uncluttered arrangement is the most attractive and the easiest to read.
- For best legibility, it is suggested that the title lettering be at least 5cm high, with authors' names and affiliations smaller.
- All lettering should be legible from a distance of approximately 1.5m. It is suggested that font size should be at least 24-point, in bold style. The typeface chosen should be simple and clear (e.g., Helvetica, Arial). Titles should be in all uppercase letters. The remainder of the text should be in a combination of upper- and lowercase letters.
- Photos should be enlarged enough to show relevant detail.
- Standard computer printouts usually are not effective on posters because the type is too small, and the lines are too thin to be seen from a distance.
